While Loop

```
while condition:
    statements
```

```
 i = 0
while i < 10:
   print("Meha")
   i = i + 1
```

```
i = 1
while i < 6:
  print(i)
  i += 1
```

```
x = 0
while x != 100:
    x = int(input("Please type in a number"))
print("Loop has ended")
```

Write a Python program using a `while` loop to ask the user to enter a password. The correct password is 123. If the password entered is incorrect, the program should ask the user to try again. When the correct password is entered, display "Access granted".

```
password = input("Enter password: ")
while password != "123":
    print("Incorrect password. Try again.")
    password = input("Enter password: ")

print("Access granted")
```

```
i = 1
while i < 6:
  print(i)
  if (i == 3):
    break
  i += 1
```

For Loop

for variable in sequence:

    Statements

for **x** in range (**m**,**n**,**o**):

```
for x in range(6):
  print(x)
```

```
for x in range (0,10,2):
   print("Hello World ", x)
```

```
for x in range(2, 30, 3):
  print(x)
```

Question
